DB & VM Backup and Recovery

- **mag. Sergej Rožman**; Abakus plus d.o.o.

- The latest version of this document is available at: http://www.abakus.si/

Real men don't use backups, they post their stuff on a public ftp server and let the rest of the world make copies.

Linus Torvalds

Abakus plus d.o.o.

ORACLE Gold Partner

History
- from 1992, ~20 employees

Applications:
- special (DB – Newspaper Distribution, FIS – Flight Information System)
- **ARBITER – the ultimate tool in audit trailing**
- **APPM - Abakus Plus Performance Monitoring Tool**

Services:
- DBA, OS administration , programming (MediaWiki, Oracle)
- networks (services, VPN, QoS, security)
- open source, monitoring (Nagios, OCS, Wiki)

Hardware:
- servers, **SAN storage**, firewalls, **Backup Server**

Infrastructure:
- from 1995 GNU/Linux ***(20 years of experience !)***
- Oracle on GNU/Linux: since RDBMS 7.1.5 & Forms 3.0 ***(before Oracle !)***
- **>20 years of experience with High-Availability !**

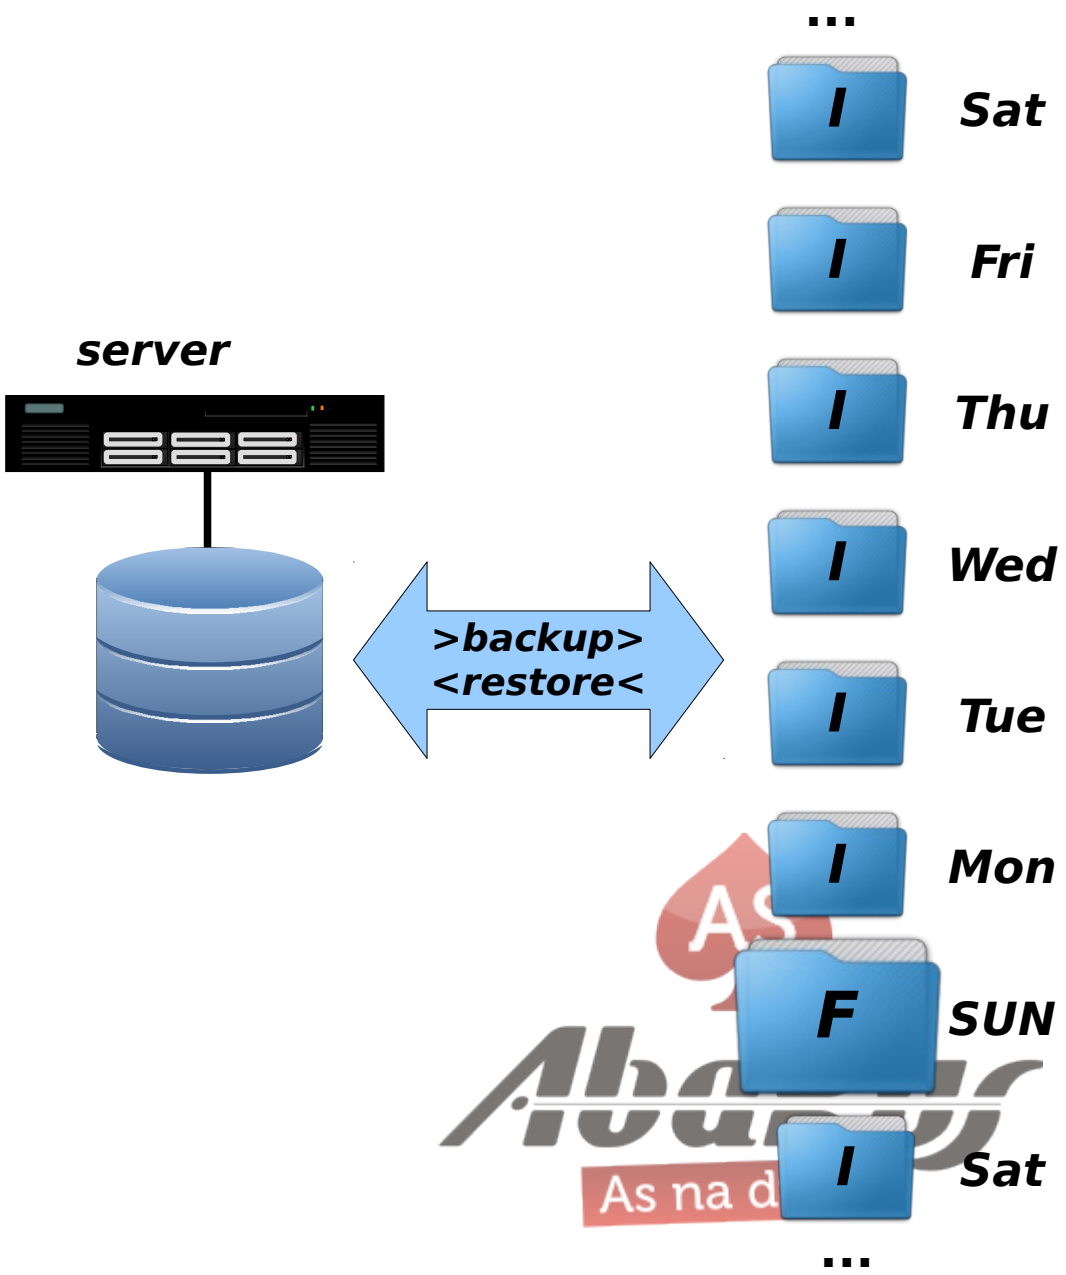
Backup and Recovery Best Practices

- Backup takes no time!
  no resources needed & no disk space;
- Recover takes no time as well!
  no resources needed;
- Copies are without errors and consistent;
- Data is always available & always in view.

Abakus
As na disku.

Classic Full/Incremental Backup Model

- backup takes long time (especially full)
- restore takes even longer (full + n × incremental)
- incremental backups not suitable for large files (DB, VMs)



Status Board

Fact	DB	VM	Notes
BACKUP in no time	☒	☒	
no resources	☒	☒	
no disk space	☒	☒	or no tape space
RECOVER in no time	☒	☒	
no resources	☒	☒	
COPIES without errors	☒	☒	
consistent	☑	☑	if done right
DATA always available	☒	☒	☑ with autoloader
always in view	☒	☒	

Tape vs. Disk drive

Tape

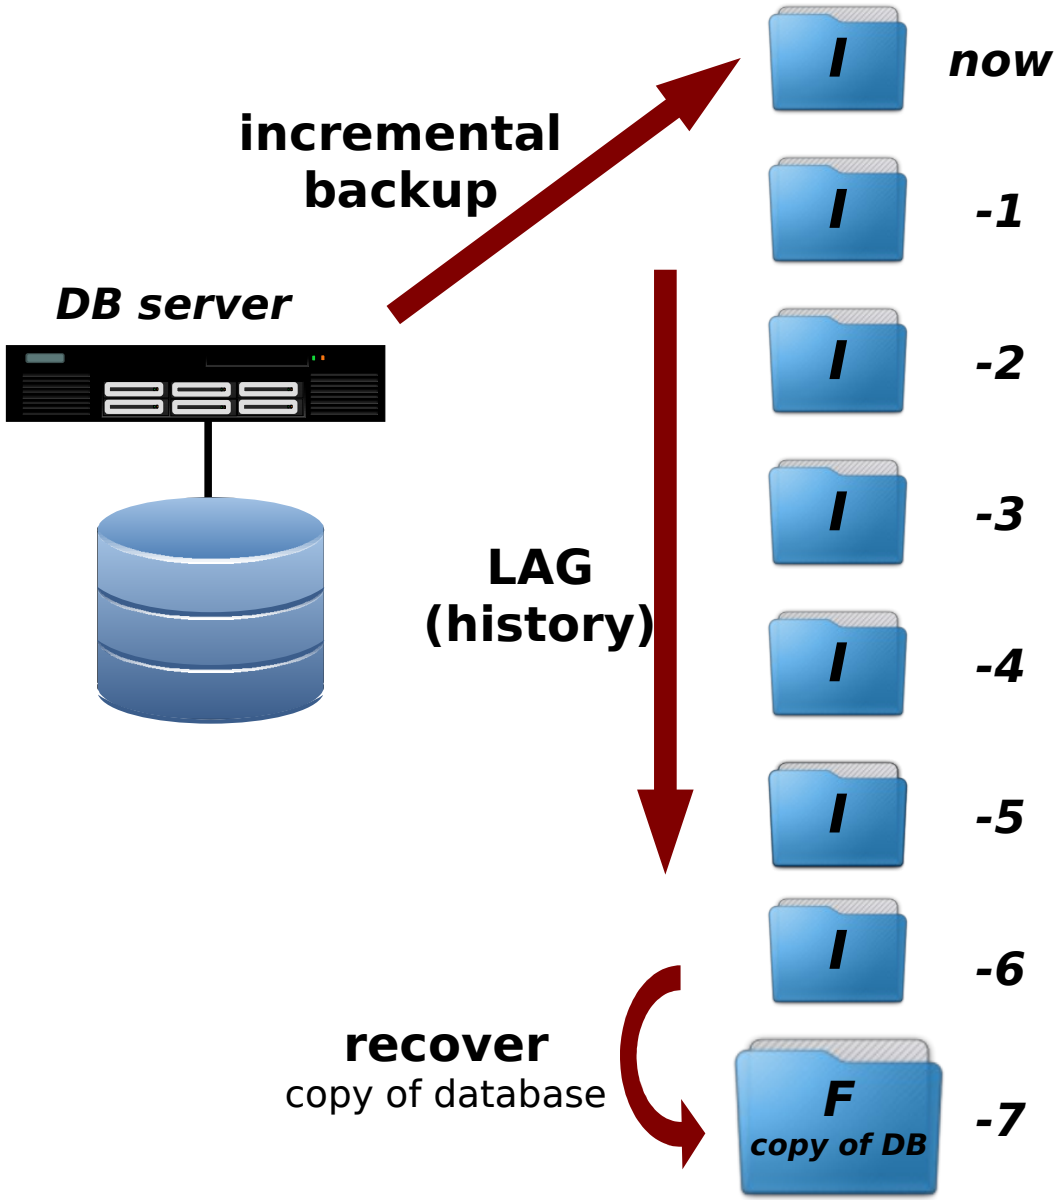
- price:
  n×1000€ (drive) + <100€ / (cartridge)
  (LTO-6 native capacity 2.5 TB)
- no future compatibility
  (new drive needed)
- Is your data really on that tape?
- high throughput, slow access time

Disk

- price: ~100€ / 3 TB SATA
- guaranted future compatibility
- WYSIWYG (if you see data, you can get data)
- moderate througput, fast access time

Abakus
As na disku.

DB Backup Full/Incremental – Example

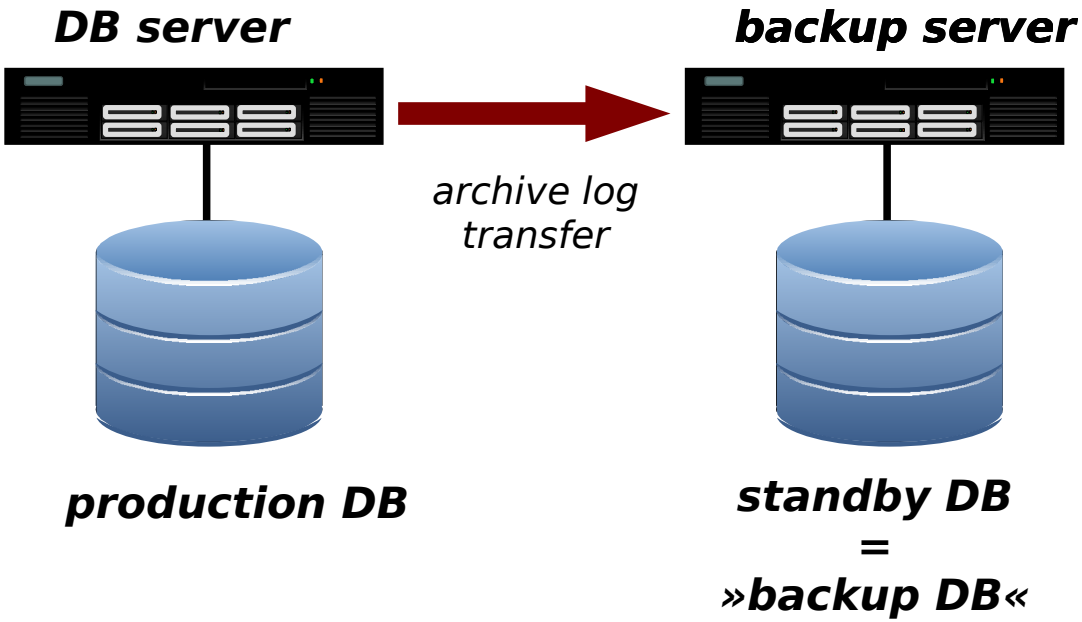


- somewhat optimized
  no Full backup except initial
- incremental backup optimized
  with Oracle Enterprise Edition
  (block change tracking)
- restore still takes long time

Abakus
As na disku.

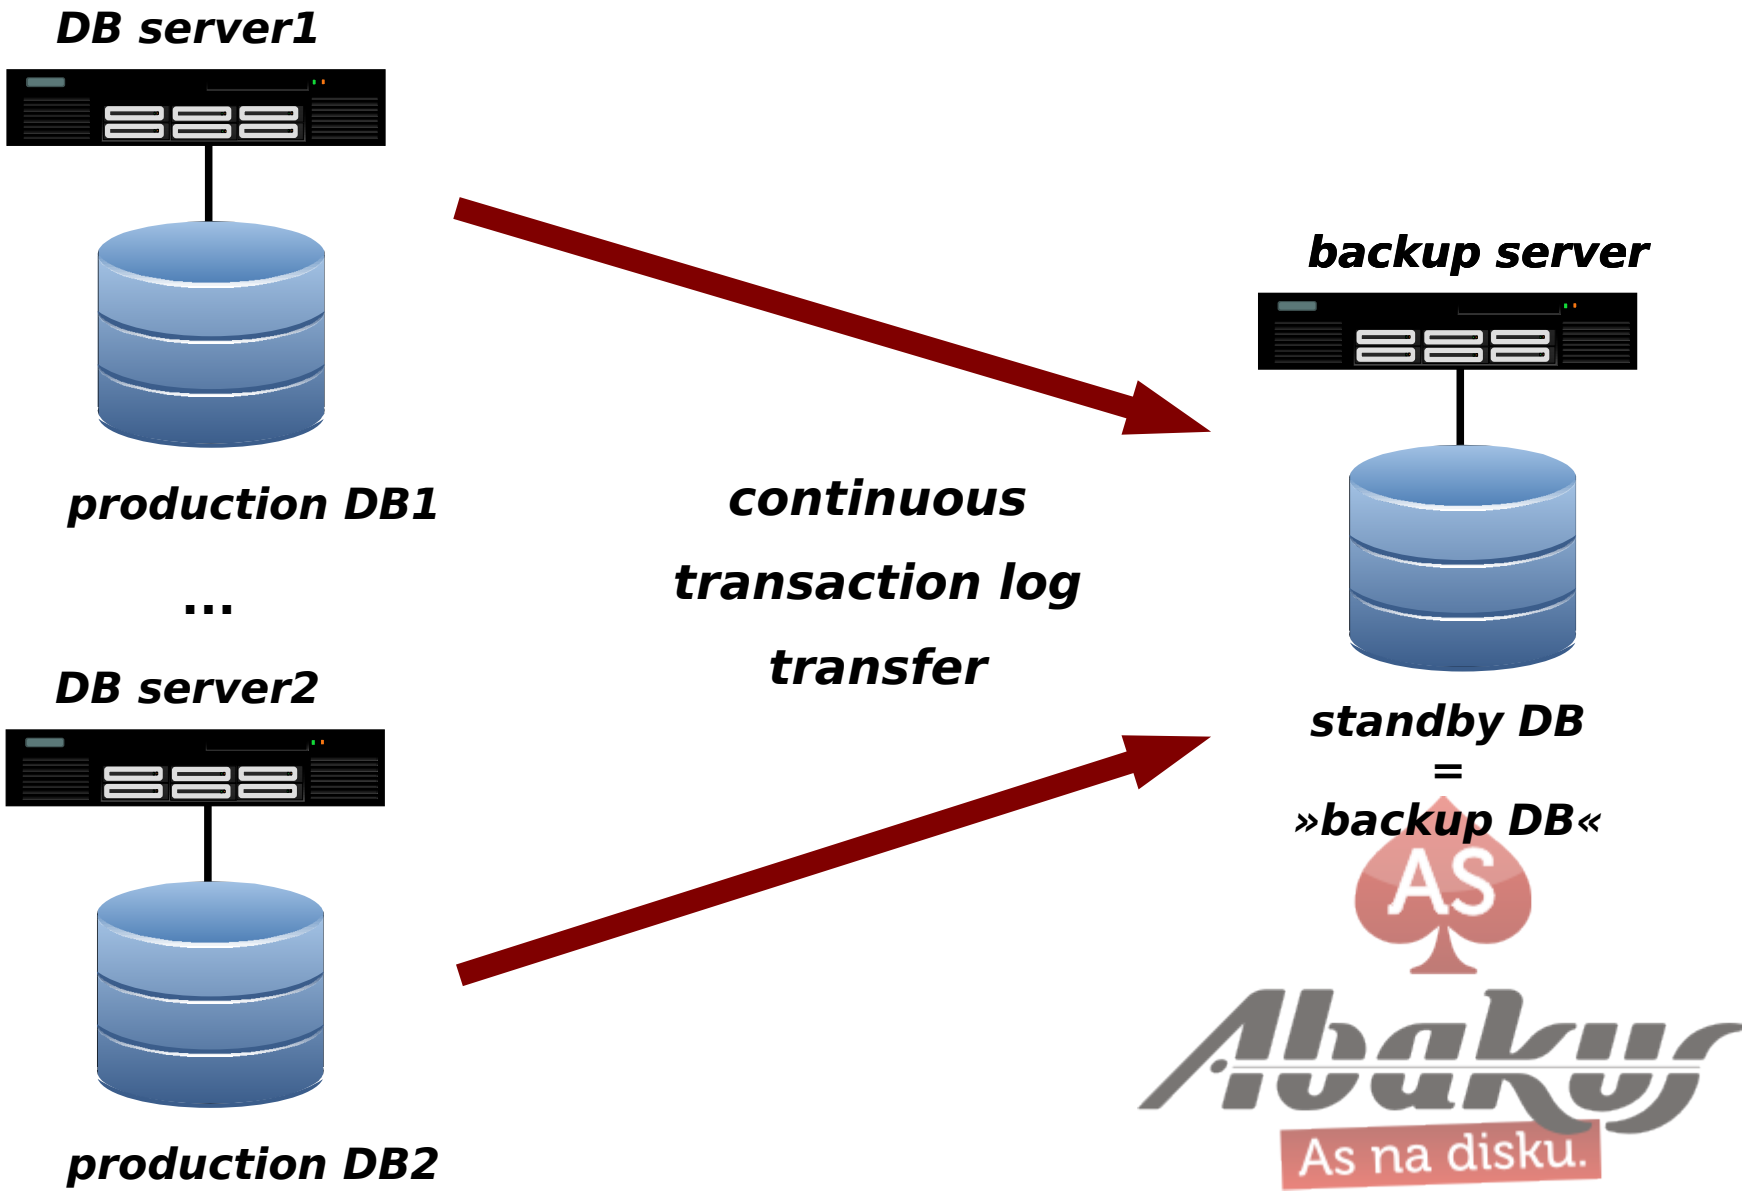
Backup in »no time«

- backup takes no additional time
- backup needs no production resources
- **BUT, WHERE IS BACKUP HISTORY ?**

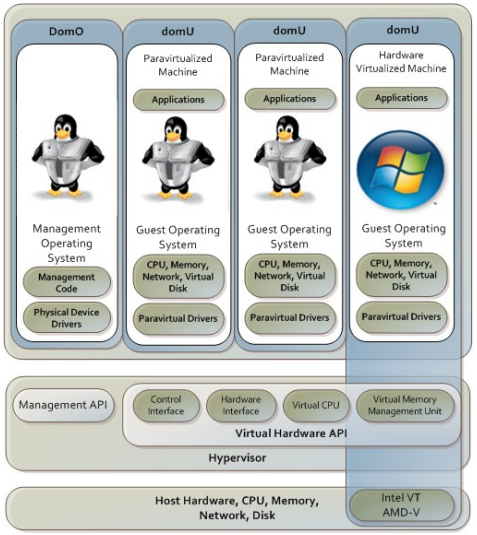


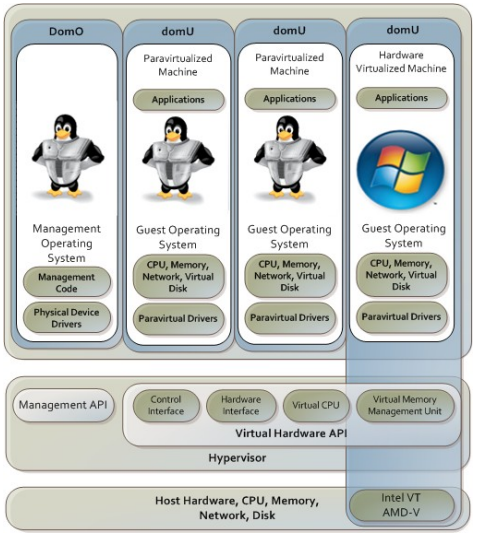
AS Abakus
As na disku.

DB Backup in »no time«



VM Backup in »no time«





backup server

asynchronous remote disk mirror

mirrored disks

Abakus
As na disku.

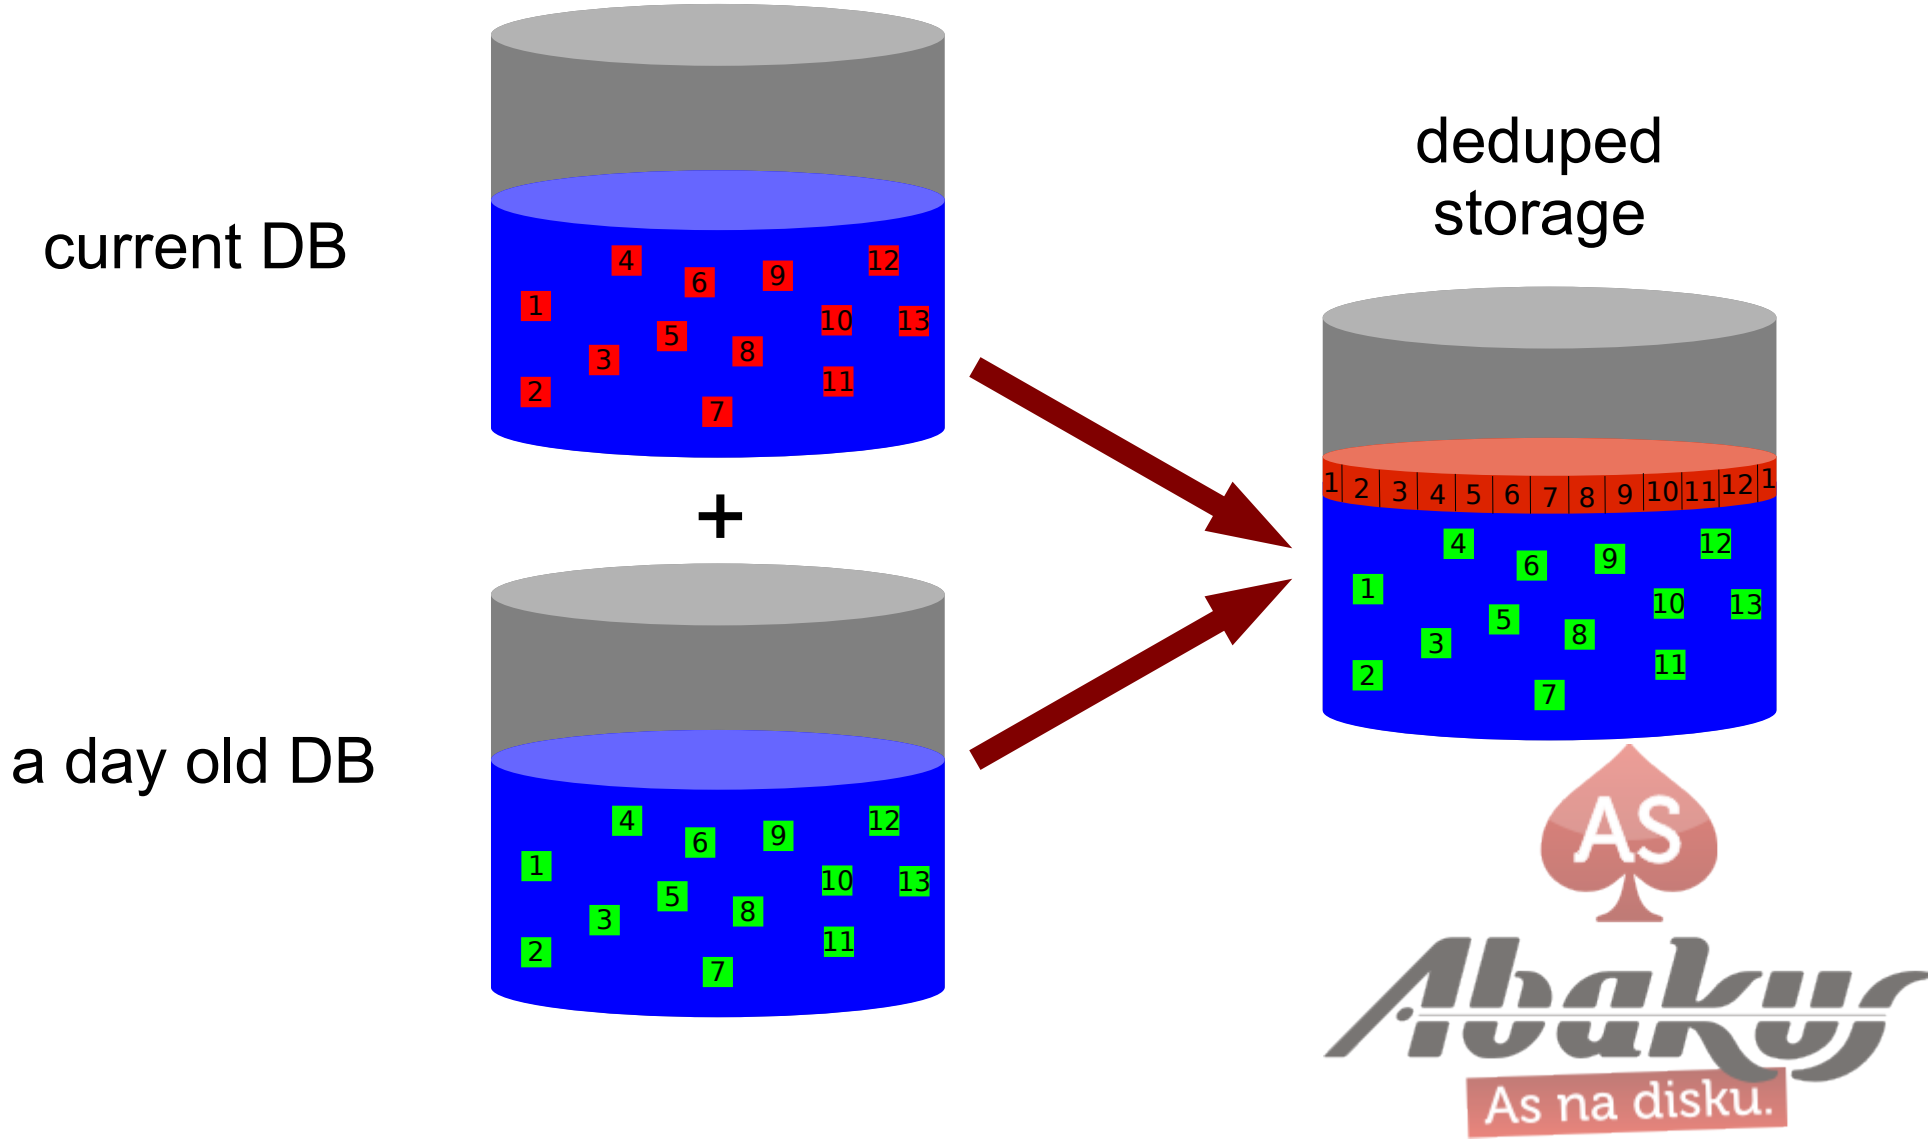
Backup Server

... and history

- snapshot
- save snapshot

- **Time and resources are consumed exclusively on backup server**
- **Backup occupies a lot of disk space !?**

Deduplication



… and (almost) no disk space

… by using data deduplication

- snapshot
- save snapshot
  to deduplicated area

Example:

- DB size 1 TB
- 1% changed/added data per day (~10 GB)
- ~200 days backup fits on 3 TB disk drive

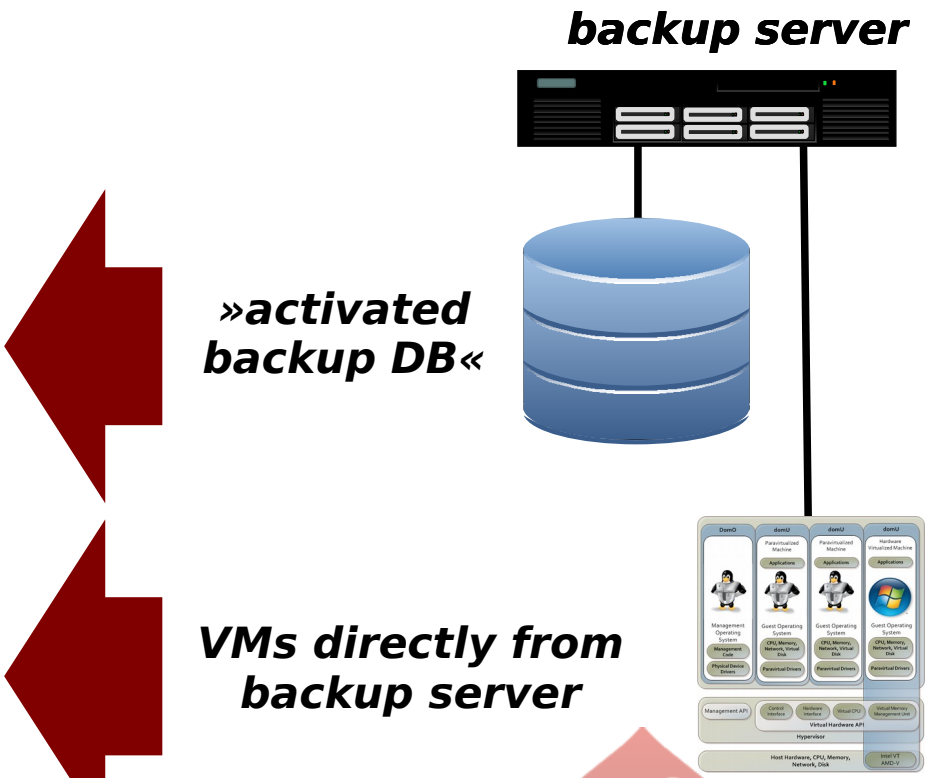
Recovery in »no time« – scenario 1

Recovery as a Service (RaaS)

- services are offered directly from the backup server

BACK IN BUSINESS IN NO TIME!*

* real restore in more appropriate time



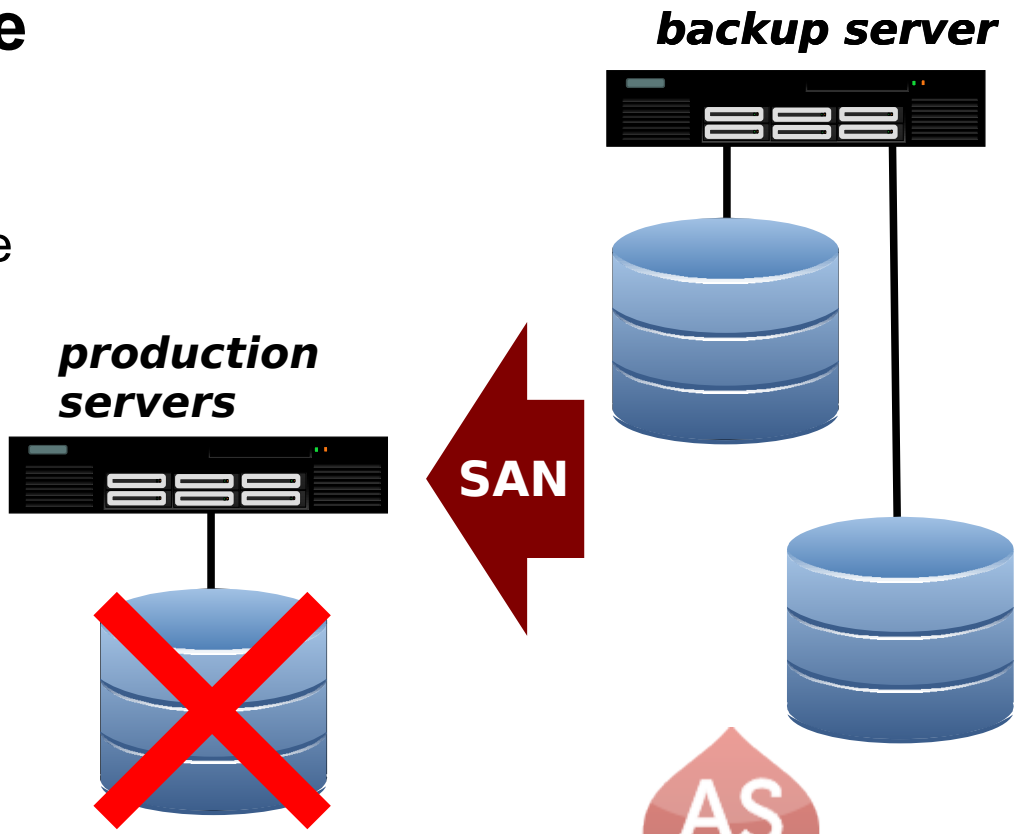
Abakus
As na disku.

Recovery in »no time« – scenario 2

Recovery as an Infrastructure

(change role to SAN storage)

- backup server works as a SAN storage infrastructure to production servers



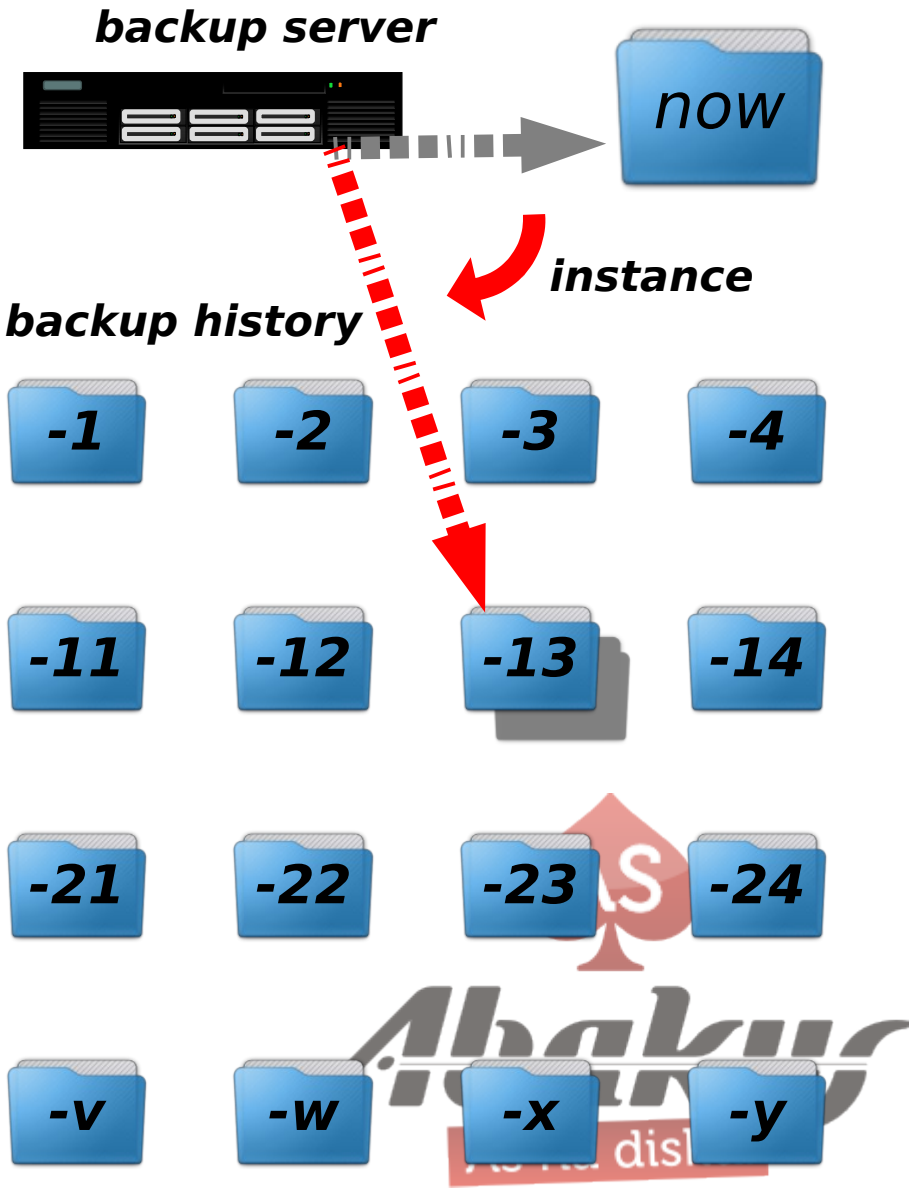
BACK IN BUSINESS IN NO TIME!*

* real restore in more appropriate time

Abakus
As na disku.

Restore/Access to Historical Data

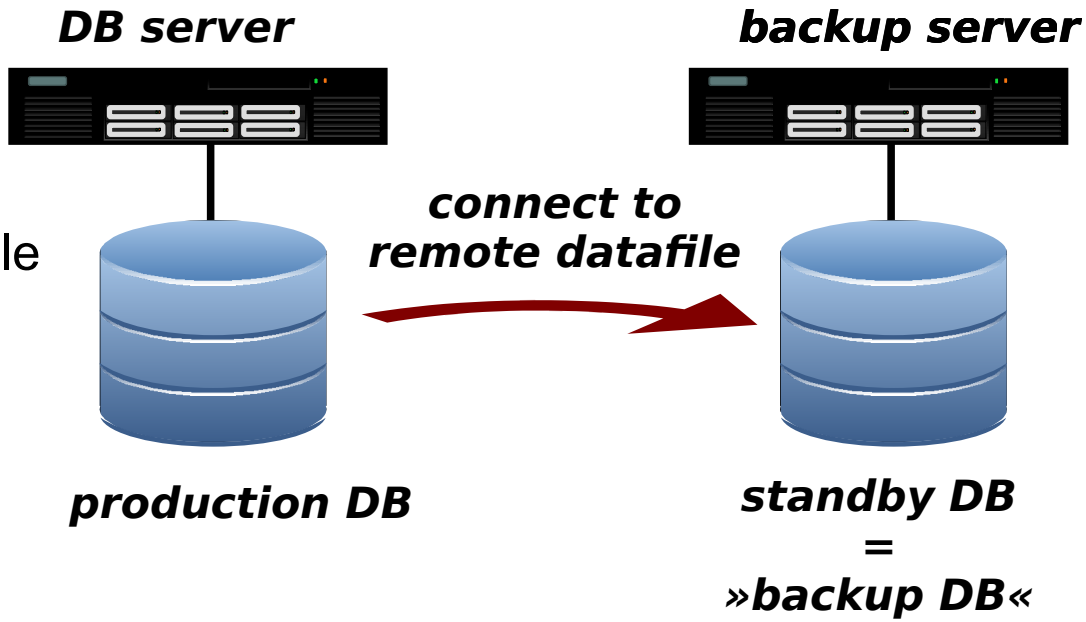
- snapshot selected slot
- stop standby database
- switch active slot to snapshot
- start instance
- recover database until needed (optional)
- open database



Recover in »no time«

Lost or currupted datafile (or even whole DB)

- make snaphot of backup DB
- start SAN software – iSCSI, SRP, …
- export LUN with backup of lost datafile
- connect LUN to DB server
- offline corrupted datafile
- switch to backup datafile
- recover backup datafile
- online backup datafile



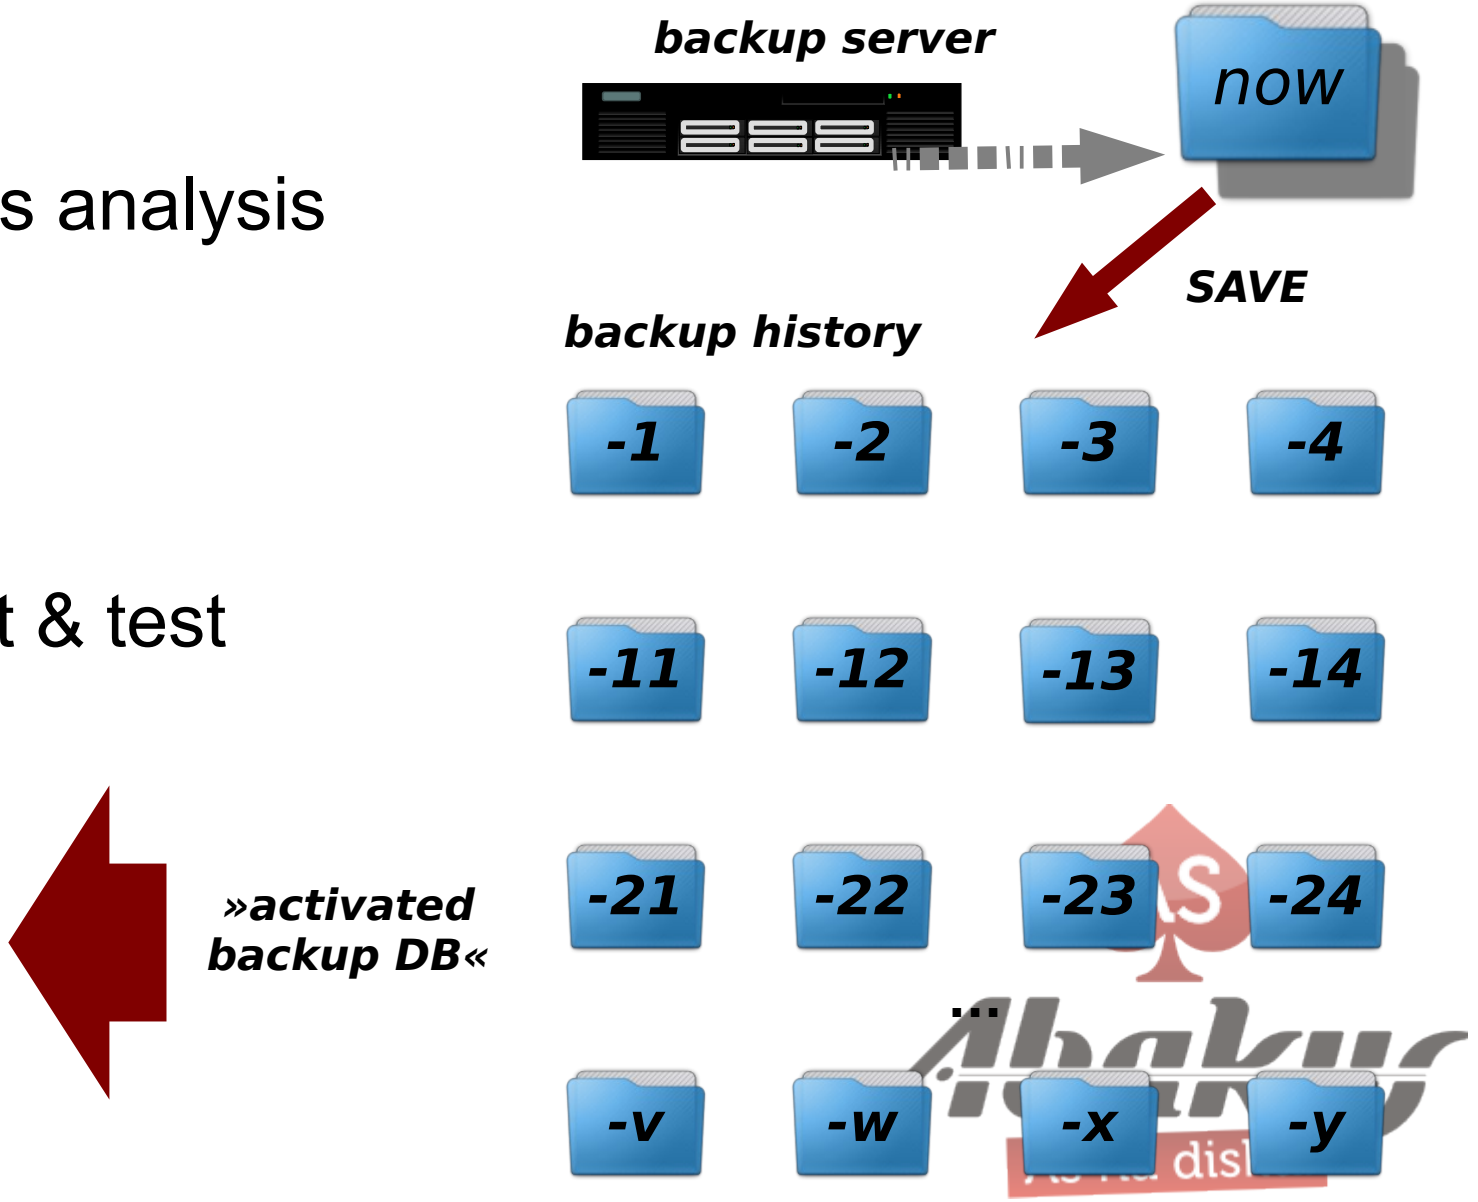
BACK IN BUSINESS IN NO TIME!*

* real restore in more appropriate time

Abakus
As na disku.

Alternative use

- BI – business analysis purposes
- reporting
- development & test



Performance

- test 1 (notebook with SSD, DB on VM):
  max_iops = **9.983**, latency = **8**, max_mbps = **251**
- test 2 (test DB, 10x 600 GB 15k FC):
  max_iops = **1.824**, latency = **11**, max_mbps = **280**
- test 3 (production DB, 30x 146 GB 15k FC):
  max_iops = **6.498**, latency = **10**, max_mbps = **455**
- test 4 (**Abakus SAN**, 16x SSD, Infiniband 40G):
  max_iops = **43.782**, latency = **0**, max_mbps = **1.727**

Performance example

The Bank

- everyday backups
- **5** databases, largest **13 TB**
- total disk capacity **60 TB**
- total saved since 1/Aug/2014 **300 TB**
- still available free space **40%**

Status Board

Fact	DB	VM	Notes
BACKUP in no time	☑	☑	
no resources	☑	☑	
no disk space	☑	☑	
RECOVER in no time	☑	☑	
no resources	☑	☑	
COPIES without errors	☑	☑	
consistent	☑	☑	
DATA always available	☑	☑	
always in view	☑	☑	

Work in Progress

- general change block tracking at block device level (asynchronous and buffered)
  - will copy ONLY changed disk blocks to backup
  - suitable for VMs
  - will make possible to back up to remote site over slow link
  - no active instance – no license fee
- point in time recovery for VMs, (maybe)
- graphical user interface, (maybe)
